PROFILE

AI Engineer & Automation Expert with 3+ years shipping production AI systems — multi-agent LLM workflows, RAG pipelines, and no-code automation backends — across six end-to-end products live today. Specialized in LLM integration (Claude, GPT, Llama, Groq, Whisper), agentic tool-calling, and orchestration with n8n, Make.com, and FastAPI. Full case studies, architecture breakdowns, and live demos: nageen-portfolio.vercel.app.

WORK EXPERIENCE

EWDTech

03/2026 – Present

AI Engineer & Automation Expert

- Shipped 15+ production automation scenarios for a live property-management SaaS spanning booking sync, dynamic pricing, VAT invoicing, and smart-lock access.
- Integrated GPT function-calling agents that parse guest messages, classify issue severity, and auto-generate guest/owner communications with zero manual steps.
- Designed a fault-tolerant Beds24 $\rightleftharpoons$ Airtable $\rightleftharpoons$ Stripe sync with token-refresh auth and retry handling, running unattended in production.

Xorsel

01/2024 – 03/2026

AI Engineer

- Built 15+ end-to-end RAG chatbots for client companies, covering ingestion, chunking, embeddings, and retrieval, saving clients significant manual work.
- Delivered speech-to-text transcription and AI summarization pipelines using Whisper ASR and Llama-3.3-70B.
- Shipped 9+ full-stack projects in Python/FastAPI, React, and TypeScript with production prompt engineering.

PROJECTS

Nestly — SaaS Property Management System

Live in production

Property-Tech SaaS · Automation Backend · Node.js, Make.com, Airtable, Stripe, Seam, OpenAI

- Built the backend end-to-end: Vercel serverless auth/onboarding API on Airtable, plus 15+ Make.com scenarios wiring Beds24, Stripe, Seam, and OpenAI into one automated booking-to-invoice pipeline.
- GPT agents parse guest messages and route by intent/severity; fault-tolerant Beds24 $\rightleftharpoons$ Airtable $\rightleftharpoons$ Stripe sync with retry + token refresh.

Demo: demo.nestly.lt/dashboard

Meeting & Task Automation Suite

In production

Multi-Agent AI · n8n Orchestration · Trello, Asana & Monday.com

- Designed and built 5 Claude-powered n8n workflows converting meeting transcripts, inbound email, and Slack chat into tasks, Gmail drafts, and Slack summaries across Trello/Asana/Monday.com.
- Self-hosted n8n on a VPS behind a domain-mapped HTTPS/TLS endpoint; built a conversational Slack $\rightleftharpoons$ Trello agent running full board CRUD across 12 REST tools.

RAG Support Widget — Grounded Q&A

In production

Embeddable AI Widget · FastAPI · BM25 Retrieval · Groq

- Built solo: FastAPI + BM25 lexical retrieval (no vector DB) behind a 4-way intent router, answering strictly from a client's own documents with a brand-voice persona enforced twice.
- Deployed as an embeddable vanilla-JS widget on Vercel serverless (Mangum) with anti-hallucination fallbacks.

Demo: rag-chatbot-pink-psi.vercel.app

Meeting Transcriber — Auto-Record & Summarize

Windows · macOS · Linux

Desktop App Automation · Electron · Local-First AI

- Built solo: a cross-platform Electron + React app that auto-detects live meetings and transcribes a 1-hour recording in ~25s via Groq Whisper, with a fully offline WASM fallback.
- LLM auto-summarizes and files notes by project; SQLite storage, per-user Google Drive sync, and signed webhook output into automation stacks like n8n.

Family Office Intelligence — AI Data Pipeline + Micro-RAG

Live demo

Agentic AI · Micro-RAG Search · FastAPI

- Built solo: an agentic discovery & enrichment pipeline across 6 public data sources with proof-gated field validation and a drafter + reviewer LLM pair auditing every answer before release.
- Idempotent GitHub Actions scheduler with committed replay state; hybrid Micro-RAG search (model2vec + Qdrant) deployed on FastAPI/Vercel.

Demo: family-office-intelligence.vercel.app

Automated Scrape Pipeline — Local Business Directory

Private beta · In production

Verified Local Directory · Automated Data Pipeline · MongoDB

- Own the data pipeline and backend: multi-source Apify scraping + dedup engine across 4 cities, merged into MongoDB with a rule-based relevance classifier and taxonomy/pricing mapping.
- Built a confidence-decay trust-scoring engine and webhook-driven GitHub Actions automation with an auto-resuming retry queue.

TECHNICAL SKILLS

Generative AI & LLMs: RAG, LangChain & Agents, agentic AI, multi-agent orchestration, function calling / tool use, Claude / OpenAI / Groq APIs, prompt engineering, CrewAI, LlamaIndex, Qdrant, OpenAI Realtime API

Automation & Orchestration: n8n, Make.com, Zapier, webhook orchestration

Backend & APIs: Python (FastAPI), Node.js, REST API design, serverless functions (Vercel, Mangum)

Integrations: Slack, Trello, Gmail, Google Drive, Stripe, Beds24, Seam, PriceLabs, MongoDB, WhatsApp/SMS

DevOps & Cloud: Docker, Git/GitHub, CI/CD (GitHub → Vercel), Vercel Functions, GitHub Actions, self-hosting

EDUCATION

B.Sc. Computer Science — Govt. College University Faisalabad · CGPA 3.64 / 4

2019 – 2023

CERTIFICATES

Agentic AI — DeepLearning.AI (Andrew Ng): agent design patterns, tool use, multi-agent orchestration.

Generative AI — Slearner (Australia): LLMs, prompt engineering, RAG, AI agents, and workflow automation.
